

Project/Role Description Template

Hiring Manager: Arihant Jain

Mentor: Pramod Kumar

Project/Role: To work in collaboration with Sales tool team in developing UI with micro frontends and designing as per Dell design Standards and that will be integrated in larger Dell Web Application GAMA.

Project/Role Description: Global Account Management and Assignment is a global tool to search and manage sales account data. This includes Sales account transfers, request update to existing account data and creation of new account records. Users also leverage this tool to search against existing sales managed account data.

Key Stakeholders:

Master Data Governance
Sales
Sales Operations

Deliverables:

- To develop a feature/component for GAMA and have seamless integration with backend APIs
- To approach front development process with the idea of micro service architecture.
- To develop codebase following coding standards recommended by the organization.
- To ensure the code is all on the Git repository.
- To share nitty gritty pertaining to project
- To explore cutting edge web technologies to build scalable and maintainable application
- To apply design thinking philosophy to every aspect of product development
- To learn best practices in software development deployment and maintainance

Key Metrics:

- Feature Development and progress everyday.
- Integrate the component developed to the overall GAMA project and ensure it is tested and meets the quality and performance criteria defined as per the project requirement

Competencies/Skills developed/Technical Training: UI Development, React Js, .NetCore
